

Call Draygon 800-724-3610 For All Ermator Pre-Separators, Single and Three Phase Vacuums/Dust Extractors, Air Scrubbers, Wet Vacuums And Tools

PRE-SEPARATORS

In grinding operations producing large amounts of dust, your **dust extractor** may need to be supplemented with a **pre-separator**. **Pre-separators** introduce an additional separation stage to capture as much dust as possible before it can reach the **dust extractor**. The benefit is increased efficiency in the separation of dust from the air stream, improved filter performance and significant reduction in the frequency of filter maintenance. A **Pre-separator** also contributes to higher airflow, faster pick-up and extended motor life. You can have confidence in the level of filtration since our pre-separators are equipped with some of the same primary filters used in our dust extractors. Both models include our popular Longopac for safe containment and disposal of concrete dust and other harmful building materials such as asbestos and lead.

C3000 35 Liter Pre-separator

C5500 Large Pre-separator

Model	Weight (lb)	Dimensions (in)
C3000	48.5	25.5 x 22 x 58
C5500	130	21 x 28 x 57

SINGLE-PHASE DUST EXTRACTORS

Pullman Ermator's single phase **HEPA dust collectors** are powerful, portable vac/separators that can be used alone for a wide variety of pick-up applications, and to supplement hand/floor power tools for dustless grinding, sanding and drilling. Excellent for both wood and concrete dust and other construction restoration materials where fast, dustless recovery is required to maintain productivity and a clean-air working environment. All units include individually tested and certified **HEPA filters** and Pullman Ermator's unique direct "dustless" deposit into poly bags for safe, easy handling and disposal. Equipped with the "Jet Pulse" filter cleaning system for maximizing airflow and pick-up efficiency.

THREE-PHASE HEPA DUST EXTRACTORS

For the largest grinding operations and major construction/restoration jobsites, you need the rugged power, capacity and performance of Pullman Ermator's **T-Line Dust Extractors**. These three-phase **HEPA dust collectors** are well known for their ability to pick-up vast amounts of dust and debris without interruption. They are capable of large volume recovery of concrete dust during floor surface preparation and for safe collection, disposal and handling of other harmful building materials including asbestos and lead. Four versatile models to choose from. Each unit can also perform as a **central dust control vacuums** for use in factories, processing plants and mills. Equipped with the Jet Pulse filter cleaning system for maximizing airflow and productivity. Dual **HEPA filters** and Longopac dustless containment & disposal system will ensure that the workplace is safe for your workers and other building occupants.

WET VACUUM

A 15 gallon W350 **Wet Vacuum** is equipped with a pump for continuous drainage as you vacuum. The pump is cooled so it can handle the most difficult slurries and other heavy liquids.

HEPA AIR SCRUBBERS

Our line of **HEPA portable air scrubbers** are designed for the professional contractor seeking to improve the air quality for their employees and customers, and at the same time, improve the quality of their work. They trap dangerous concrete dust and other particulates from construction, restoration and remediation projects that have the potential of causing lung damage. The unique cabinet construction make them incredibly lightweight, portable and easy to use, particularly when erecting a containment zone. Both models are equipped with tested and certified **HEPA filters**.
